This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed/9 by International Gemological Institute (IGI). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vagor deposition) or by IPHTI (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contact-optical measuing device, a wide range analytical techniques including FTIR, UV-VIS-NIR, raman spectroscopy, and florvescence analysis at various excitation avaelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor appraisal and by making the report IGI does not agree to purchase
